Calculation policy – In line with mainstream National Curriculum

The following pages show the progression in calculation (addition, subtraction, multiplication and division) and how this works in line with the National Curriculum. The consistent use of the CPA (concrete, pictorial, abstract) approach helps children develop mastery across all the operations in an efficient and reliable way. This policy shows how these methods develop children's confidence in their understanding of both written and mental methods.

Calculation policy

KEY STAGE 1

Children develop the core ideas that underpin all calculation. They begin by connecting calculation with counting on and counting back, but they should learn that understanding wholes and parts will enable them to calculate efficiently and accurately, and with greater flexibility. They learn how to use an understanding of 10s and 1s to develop their calculation strategies, especially in addition and subtraction.

Key language: whole, part, ones, ten, tens, number bond, add, addition, plus, total, altogether, subtract, subtraction, find the difference, take away, minus, less, more, group, share, equal, equals, is equal to, groups, equal groups, times, multiply, multiplied by, divide, share, shared equally, times-table

Addition and subtraction: Children first learn to connect addition and subtraction with counting, but they soon develop two very important skills: an understanding of parts and wholes, and an understanding of unitising 10s, to develop efficient and effective calculation strategies based on known number bonds and an increasing awareness of place value. Addition and subtraction are taught in a way that is interlinked to highlight the link between the two operations. A key idea is that children will select methods and approaches based on their number sense. For example, in Year 1, when faced with $15 - 3$ and $15 - 13$, they will adapt their ways of approaching the calculation appropriately. The teaching should always emphasise the importance of mathematical thinking to ensure accuracy and flexibility of approach, and the importance of using known number facts to harness their recall of bonds within 20 to support both addition and subtraction methods.

In Year 2, they will start to see calculations presented in a column format, although this is not expected to be formalised until KS2. We show the column method in Year 2 as an option; teachers may not wish to include it until Year 3.

Multiplication and division: Children develop an awareness of equal groups and link this with counting in equal steps, starting with 2s, 5s and 10s. In Year 2, they learn to connect the language of equal groups with the mathematical symbols for multiplication and division.

They learn how multiplication and division can be related to repeated addition and repeated subtraction to find the answer to the calculation. In this key stage, it is vital that children explore and experience a variety of strong images and manipulative representations of equal groups, including concrete experiences as well as abstract calculations.

Children begin to recall some key multiplication facts, including doubles, and an understanding of the 2, 5 and 10 times-tables and how they are related to counting.

Fractions: In Year 1, children encounter halves and quarters, and link this with their understanding of sharing. They experience key spatial representations of these fractions, and learn to recognise examples and non-examples, based on their awareness of equal parts of a whole.

In Year 2, they develop an awareness of unit fractions and experience non-unit fractions, and they learn to write them and read them in the common format of numerator and denominator.

Calculation policy

Year 1			
	Concrete	Pictorial	Abstract
Year 1 Addition	Counting and adding more Children add one more person or object to a group to find one more.	Counting and adding more Children add one more cube or counter to a group to represent one more.  <i>One more than 4 is 5.</i>	Counting and adding more Use a number line to understand how to link counting on with finding one more.  <i>One more than 6 is 7. 7 is one more than 6.</i> Learn to link counting on with adding more than one.  $5 + 3 = 8$
	Understanding part-part-whole relationship Sort people and objects into parts and understand the relationship with the whole.  <i>The parts are 2 and 4. The whole is 6.</i>	Understanding part-part-whole relationship Children draw to represent the parts and understand the relationship with the whole.  <i>The parts are 1 and 5. The whole is 6.</i>	Understanding part-part-whole relationship Use a part-whole model to represent the numbers.  $6 + 4 = 10$ $6 + 4 = 10$
	Knowing and finding number bonds within 10	Knowing and finding number bonds within 10	Knowing and finding number bonds within 10

Calculation policy

	<p>Break apart a group and put back together to find and form number bonds.</p>  $3 + 4 = 7$  $6 = 2 + 4$	<p>Use five and ten frames to represent key number bonds.</p>  $5 = 4 + 1$  $10 = 7 + 3$	<p>Use a part-whole model alongside other representations to find number bonds. Make sure to include examples where one of the parts is zero.</p> <p>a)</p>  <p>b)</p>  $4 + 0 = 4$ $3 + 1 = 4$
	<p>Understanding teen numbers as a complete 10 and some more Complete a group of 10 objects and count more.</p>  <p><i>13 is 10 and 3 more.</i></p>	<p>Understanding teen numbers as a complete 10 and some more Use a ten frame to support understanding of a complete 10 for teen numbers.</p>  <p><i>13 is 10 and 3 more.</i></p>	<p>Understanding teen numbers as a complete 10 and some more.</p> <p><i>1 ten and 3 ones equal 13.</i></p> $10 + 3 = 13$
	<p>Adding by counting on Children use knowledge of counting to 20 to find a total by counting on using people or objects.</p>	<p>Adding by counting on Children use counters to support and represent their counting on strategy.</p>	<p>Adding by counting on Children use number lines or number tracks to support their counting on strategy.</p>

Calculation policy

			 $7 + 5 = \square$
	<p>Adding the 1s Children use bead strings to recognise how to add the 1s to find the total efficiently.</p>  $2 + 3 = 5$ $12 + 3 = 15$	<p>Adding the 1s Children represent calculations using ten frames to add a teen and 1s.</p>  $2 + 3 = 5$ $12 + 3 = 15$	<p>Adding the 1s Children recognise that a teen is made from a 10 and some 1s and use their knowledge of addition within 10 to work efficiently.</p> $3 + 5 = 8$ <p>So, $13 + 5 = 18$</p>
	<p>Bridging the 10 using number bonds Children use a bead string to complete a 10 and understand how this relates to the addition.</p>  <p>7 add 3 makes 10. So, 7 add 5 is 10 and 2 more.</p>	<p>Bridging the 10 using number bonds Children use counters to complete a ten frame and understand how they can add using knowledge of number bonds to 10.</p> 	<p>Bridging the 10 using number bonds Use a part-whole model and a number line to support the calculation.</p>  $9 + 4 = 13$
<p>Year 1 Subtraction</p>	<p>Counting back and taking away Children arrange objects and remove to find how many are left.</p>	<p>Counting back and taking away Children draw and cross out or use counters to represent objects from a problem.</p>	<p>Counting back and taking away Children count back to take away and use a number line or number track to support the method.</p>

Calculation policy

1 less than 6 is 5.
6 subtract 1 is 5.

$$9 - \square = \square$$

There are children left.

$$9 - 3 = 6$$

Finding a missing part, given a whole and a part

Children separate a whole into parts and understand how one part can be found by subtraction.

$$8 - 5 = ?$$

Finding a missing part, given a whole and a part

Children represent a whole and a part and understand how to find the missing part by subtraction.

$$5 - 4 = \square$$

Finding a missing part, given a whole and a part

Children use a part-whole model to support the subtraction to find a missing part.

$$7 - 3 = ?$$

Children develop an understanding of the relationship between addition and subtraction facts in a part-whole model.

$$\begin{array}{l} \square - \square = \square \\ \square - \square = \square \\ \square + \square = \square \\ \square + \square = \square \end{array}$$

Finding the difference

Arrange two groups so that the difference between the groups can be worked out.

Finding the difference

Represent objects using sketches or counters to support finding the difference.

Finding the difference

Children understand 'find the difference' as subtraction.

Calculation policy

 <p>8 is 2 more than 6. 6 is 2 less than 8. The difference between 8 and 6 is 2.</p>	 <p>$5 - 4 = 1$ The difference between 5 and 4 is 1.</p>	<p>$10 - 4 = 6$ The difference between 10 and 6 is 4.</p>
<p>Subtraction within 20 Understand when and how to subtract 1s efficiently.</p> <p>Use a bead string to subtract 1s efficiently.</p>  <p>$5 - 3 = 2$ $15 - 3 = 12$</p>	<p>Subtraction within 20 Understand when and how to subtract 1s efficiently.</p>  <p>$5 - 3 = 2$ $15 - 3 = 12$</p>	<p>Subtraction within 20 Understand how to use knowledge of bonds within 10 to subtract efficiently.</p> <p>$5 - 3 = 2$ $15 - 3 = 12$</p>
<p>Subtracting 10s and 1s For example: $18 - 12$</p> <p>Subtract 12 by first subtracting the 10, then the remaining 2.</p>  <p>First subtract the 10, then take away 2.</p>	<p>Subtracting 10s and 1s For example: $18 - 12$</p> <p>Use ten frames to represent the efficient method of subtracting 12.</p>  <p>First subtract the 10, then subtract 2.</p>	<p>Subtracting 10s and 1s Use a part-whole model to support the calculation.</p>  <p>$19 - 14$ $19 - 10 = 9$ $9 - 4 = 5$ So, $19 - 14 = 5$</p>
<p>Subtraction bridging 10 using number bonds For example: $12 - 7$</p> <p>Arrange objects into a 10 and some 1s, then decide on how to split the 7 into parts.</p>	<p>Subtraction bridging 10 using number bonds Represent the use of bonds using ten frames.</p>	<p>Subtraction bridging 10 using number bonds Use a number line and a part-whole model to support the method.</p> <p>$13 - 5$</p>

Calculation policy

	 <p>7 is 2 and 5, so I take away the 2 and then the 5.</p>	 <p>For $13 - 5$, I take away 3 to make 10, then take away 2 to make 8.</p>																																																		
Year 1 Multiplication	Recognising and making equal groups Children arrange objects in equal and unequal groups and understand how to recognise whether they are equal. A  B  C 	Recognising and making equal groups Children draw and represent equal and unequal groups. A  B 	Describe equal groups using words Three equal groups of 4. Four equal groups of 3.																																																	
	Finding the total of equal groups by counting in 2s, 5s and 10s  There are 5 pens in each pack ... 5...10...15...20...25...30...35...40...	Finding the total of equal groups by counting in 2s, 5s and 10s 100 squares and ten frames support counting in 2s, 5s and 10s.  <table border="1" data-bbox="956 1016 1216 1153"><tr><td>1</td><td>2</td><td>3</td><td>4</td><td>5</td><td>6</td><td>7</td><td>8</td><td>9</td><td>10</td></tr><tr><td>11</td><td>12</td><td>13</td><td>14</td><td>15</td><td>16</td><td>17</td><td>18</td><td>19</td><td>20</td></tr><tr><td>21</td><td>22</td><td>23</td><td>24</td><td>25</td><td>26</td><td>27</td><td>28</td><td>29</td><td>30</td></tr><tr><td>31</td><td>32</td><td>33</td><td>34</td><td>35</td><td>36</td><td>37</td><td>38</td><td>39</td><td>40</td></tr><tr><td>41</td><td>42</td><td>43</td><td>44</td><td>45</td><td>46</td><td>47</td><td>48</td><td>49</td><td>50</td></tr></table>	1	2	3	4	5	6	7	8	9	10	11	12	13	14	15	16	17	18	19	20	21	22	23	24	25	26	27	28	29	30	31	32	33	34	35	36	37	38	39	40	41	42	43	44	45	46	47	48	49	50
1	2	3	4	5	6	7	8	9	10																																											
11	12	13	14	15	16	17	18	19	20																																											
21	22	23	24	25	26	27	28	29	30																																											
31	32	33	34	35	36	37	38	39	40																																											
41	42	43	44	45	46	47	48	49	50																																											
Year 1 Division	Grouping Learn to make equal groups from a whole and find how many equal groups of a certain size can be made. Sort a whole set people and objects into equal groups.	Grouping Represent a whole and work out how many equal groups.  There are 10 in total.	Grouping Children may relate this to counting back in steps of 2, 5 or 10. 																																																	

Calculation policy

<div data-bbox="353 145 911 295"></div> <p data-bbox="353 331 779 432"><i>There are 10 children altogether. There are 2 in each group. There are 5 groups.</i></p>	<p data-bbox="958 145 1301 209"><i>There are 5 in each group. There are 2 groups.</i></p>	
<p data-bbox="353 485 904 584">Sharing Share a set of objects into equal parts and work out how many are in each part.</p> <div data-bbox="353 612 891 756"></div>	<p data-bbox="958 485 1478 616">Sharing Sketch or draw to represent sharing into equal parts. This may be related to fractions.</p> <div data-bbox="958 655 1507 767"></div>	<p data-bbox="1559 485 2078 584">Sharing <i>10 shared into 2 equal groups gives 5 in each group.</i></p>

Year 2 Multiplication																																																			

Calculation policy

Equal groups and repeated addition	<p>Recognise equal groups and write as repeated addition and as multiplication.</p>  <p><i>3 groups of 4 chairs 12 chairs altogether</i></p>	<p>Recognise equal groups using standard objects such as counters and write as repeated addition and multiplication.</p>  <p><i>3 groups of 5 15 in total</i></p>	<p>Use a number line and write as repeated addition and as multiplication.</p>  <p>$5 + 5 + 5 = 15$ $3 \times 5 = 15$</p>
Using arrays to represent multiplication and support understanding	<p>Understand the relationship between arrays, multiplication and repeated addition.</p>  <p><i>4 groups of 5</i></p>	<p>Understand the relationship between arrays, multiplication and repeated addition.</p>  <p><i>4 groups of 5 ... 5 groups of 5</i></p>	<p>Understand the relationship between arrays, multiplication and repeated addition.</p>  <p>$5 \times 5 = 25$</p>
Understanding commutativity	<p>Use arrays to visualise commutativity.</p>  <p><i>I can see 6 groups of 3. I can see 3 groups of 6.</i></p>	<p>Form arrays using counters to visualise commutativity. Rotate the array to show that orientation does not change the multiplication.</p>  <p><i>This is 2 groups of 6 and also 6 groups of 2.</i></p>	<p>Use arrays to visualise commutativity.</p>  <p>$4 + 4 + 4 + 4 + 4 = 20$ $5 + 5 + 5 + 5 = 20$ $4 \times 5 = 20$ and $5 \times 4 = 20$</p>
Learning $\times 2$, $\times 5$ and $\times 10$ table facts	<p>Develop an understanding of how to unitise groups of 2, 5 and 10 and learn corresponding times-table facts.</p>	<p>Understand how to relate counting in unitised groups and repeated addition with knowing key times-table facts.</p>	<p>Understand how the times-tables increase and contain patterns.</p>

Calculation policy

	<div></div> <p>3 groups of 10 ... 10, 20, 30 $3 \times 10 = 30$</p>	<div></div> <p>$10 + 10 + 10 = 30$ $3 \times 10 = 30$</p>	<div></div> <p>$5 \times 10 = 50$ $6 \times 10 = 60$</p>
Year 2 Division			
Sharing equally	Start with a whole and share into equal parts, one at a time.	Represent the objects shared into equal parts using a bar model.	Use a bar model to support understanding of the division.

Calculation policy

	<div></div> <p>12 shared equally between 2. They get 6 each.</p> <p>Start to understand how this also relates to grouping. To share equally between 3 people, take a group of 3 and give 1 to each person. Keep going until all the objects have been shared</p> <div></div> <p>They get 5  each.</p> <p>15 shared equally between 3. They get 5 each.</p>	<div></div> <p>20 shared into 5 equal parts. There are 4 in each part.</p>	<div></div> <p>18 ÷ 2 = 9</p>
Grouping equally	<p>Understand how to make equal groups from a whole.</p> <div></div> <p>8 divided into 4 equal groups. There are 2 in each group.</p>	<p>Understand the relationship between grouping and the division statements.</p>	<p>Understand how to relate division by grouping to repeated subtraction.</p>

Calculation policy

		<div>$12 \div 3 = 4$ </div> <div>$12 \div 4 = 3$ </div> <div>$12 \div 6 = 2$ </div> <div>$12 \div 2 = 6$ </div>	<div></div> <div>There are 4 groups now.</div> <div><i>12 divided into groups of 3.</i> $12 \div 3 = 4$</div> <div><i>There are 4 groups.</i></div>
<div>Using known times-tables to solve divisions</div>	<div>Understand the relationship between multiplication facts and division.</div> <div></div> <div><i>4 groups of 5 cars is 20 cars in total.</i> <i>20 divided by 4 is 5.</i></div>	<div>Link equal grouping with repeated subtraction and known times-table facts to support division.</div> <div></div> <div><i>40 divided by 4 is 10.</i></div> <div>Use a bar model to support understanding of the link between times-table knowledge and division.</div> <div></div>	<div>Relate times-table knowledge directly to division.</div> <div>$1 \times 10 = 10$ $2 \times 10 = 20$ $3 \times 10 = 30$ $4 \times 10 = 40$ $5 \times 10 = 50$ $6 \times 10 = 60$ $7 \times 10 = 70$ $8 \times 10 = 80$</div> <div><div>I used the 10 times-table to help me. $3 \times 10 = 30.$</div></div> <div><i>I know that 3 groups of 10 makes 30, so I know that 30 divided by 10 is 3.</i></div> <div>$3 \times 10 = 30$ so $30 \div 10 = 3$</div>
